

Cond
A1
a guide part provided on one of the first member and the second member for guiding the first member and the second member for relative rotation therebetween about a second axis different from the first axis; and

at least one generally spherical low friction member disposed between the first member and the second member.

A2
4. (Amended) The display device according to claim 1, wherein said at least one generally spherical low friction member comprises a plurality of generally spherical low friction members, the plurality of generally spherical low friction members being held on one of the first member and the second member and slidable with respect to the other of the first member and the second member.

5. The display device according to claim 3, wherein the generally spherical low friction member comprises one of a ball-shaped member and a mushroom-shaped member.
